Notice of Allowability

Application No.

09/932,439

Examiner

Hong Cho

Applicant(s)

JIANG ET AL.

Art Unit

2616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to the amendment filed on 12/07/2005.
2. ☒ The allowed claim(s) is/are 1, 4-17, 19-21, 23-32, 34 and 36 (renumbered 1-30).
3. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) ☐ All b) ☐ Some* c) ☐ None of the:
 1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.

THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

4. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
 - (a) ☐ including changes required by the Notice of Draftperson's Patent Drawing Review (PTO-948) attached
 - 1) ☐ hereto or 2) ☐ to Paper No./Mail Date _____.
 - (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☒ Notice of References Cited (PTO-892)
2. ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
3. ☐ Information Disclosure Statements (PTO-1449 or PTO/SB/08),
Paper No./Mail Date _____
4. ☐ Examiner's Comment Regarding Requirement for Deposit
of Biological Material
5. ☐ Notice of Informal Patent Application (PTO-152)
6. ☐ Interview Summary (PTO-413),
Paper No./Mail Date _____
7. ☒ Examiner's Amendment/Comment
8. ☐ Examiner's Statement of Reasons for Allowance
9. ☐ Other _____

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Claims 1, 6, 10, 11, 12, 19, 25, 26, 27, and 34 have been amended as shown in the attachment A.

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hong Cho whose telephone number is 571-272-3087. The examiner can normally be reached on Mon-Fri 7 am to 4 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hassan Kizou can be reached on 571-272-3088. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business

Atty. Docket No.: RMWR.P007

Patent 09/932,439

*Attachment A*IN THE CLAIMS

1 1. (currently amended) A method for conducting a communication session,
2 comprising:
3 during the communication session, triggering a wireless data ~~communication session~~
4 via with a wireless data channel from a voice ~~communication session~~, including pushing
5 data to the wireless data channel and pulling data from the wireless data ~~channel; channel,~~
6 wherein triggering ~~the a~~-wireless data ~~communication session~~ includes transmitting
7 one or more of automatic number identification (ANI) data, dialed number identification
8 service (DNIS) data, and unique identifier (UID) data via a wireless ~~device; device;~~ and
9 during the communication session, triggering a voice ~~communication session via~~
10 with a voice channel from ~~the a~~-wireless data ~~communication session~~, including pushing
11 data to the voice channel and pulling data from the voice channel, wherein during the
12 communication session, data is maintained across ~~shared between~~ the wireless data channel
13 and the voice channel, and wherein the data pushed and pulled includes VoiceXML data,
14 hypertext transfer protocol (HTTP) data, wireless application protocol (WAP) data, short
15 message service (SMS) data, and wireless markup language (WML) data; and
16 a call service that facilitates the communication session, including,
17 communicating with a customer application to receive a specification of data
18 to be pushed or pulled during the communication session;
19 performing data formatting as required on data to be pushed or pulled during
20 the communication session;
21 communicating with an interactive voice response (IVR) application,
22 including transferring formatted data to the IVR application for delivery to a wireless
23 device and receiving data from the wireless device via the IVR application; and
24 an incall service that that handles voice channel content to be sent to a
25 wireless device in response to a request from the wireless device, the incall service
26 including,
27 receiving content from the customer application, wherein the content
28 is selected using a wireless device;

Arty. Docket No.: RMWR.P007

Patent 09/932,439

29 transferring the content to the IVR application;
30 notifying the customer application that the IVR application is ready
31 to communicate with the wireless device; and
32 sending an identifier of the wireless device and a status message to
33 the customer application, wherein the status message indicates a status of communication
34 between the wireless device and the IVR application.

1 Claims 2 and 3 (canceled).

1 4. (currently amended) The method of claim 1 ~~claim 3~~, wherein the content is
2 selected during the communication session.

1 5. (currently amended) The method of claim 1-2, wherein the content is
2 selected before the communication session, and wherein the content is associated with an
3 identifier of the wireless device.

1 6. (currently amended) A method for conducting a communication session
2 comprising ~~The method of claim 2,~~ wherein the call service further includes:
3 during the communication session, triggering a wireless data communication via a
4 wireless data channel from a voice communication, including pushing data to the wireless
5 data channel and pulling data from the wireless data channel;
6 wherein triggering the wireless data communication includes transmitting one or
7 more of automatic number identification (ANI) data, dialed number identification service
8 (DNIS) data, and unique identifier (UID) data via a wireless device;
9 during the communication session, triggering a voice communication via a voice
10 channel from the wireless data communication, including pushing data to the voice channel
11 and pulling data from the voice channel, wherein during the communication session, data is
12 maintained across the wireless data channel and the voice channel, and wherein the data
13 pushed and pulled includes VoiceXML data, hypertext transfer protocol (HTTP) data,

Atty. Docket No.: RMWR.P007

Patent 09/932,439

14 wireless application protocol (WAP) data, short message service (SMS) data, and wireless
15 markup language (WML) data; and
16 a call service that facilitates the communication session, including,
17 communicating with a customer application to receive a specification of data
18 to be pushed or pulled during the communication session;
19 performing data formatting as required on data to be pushed or pulled during
20 the communication session;
21 communicating with an interactive voice response (IVR) application,
22 including transferring formatted data to the IVR application for delivery to a wireless
23 device and receiving data from the wireless device via the IVR application; and
24 an outcall service that handles voice channel content to be sent to a
25 wireless device at a predetermined time, the outcall service including, including:
26 receiving content from the customer application;
27 transferring the content to the IVR application;
28 notifying the customer application that the IVR application is ready
29 to communicate with the wireless device; and
30 sending a status message to the customer application that indicates a
31 status of communication between the wireless device and the IVR application, including
32 any response from the wireless device.

1 7. (currently amended) The method of claim 1, further comprising a home
2 page provisioning service, including:
3 after the initiation of a voice communication session from a wireless device,
4 receiving an identifier for the wireless device;
5 leaving terminating the voice communication session;
6 locating a homepage uniform resource locator (URL) using the identifier;
7 sending the homepage URL to a messaging service, wherein the messaging service
8 sends an actionable alert to the wireless device, wherein the homepage URL is embedded in
9 the actionable alert such that responding to the actionable alert using the wireless device
10 initiates a data communication session with the homepage URL.

Atty. Docket No.: RMWR.P007

Patent 09/932,439

1 8. (currently amended) The method of claim 1, further comprising a fax
2 service, including:
3 receiving previously scheduled ~~fax~~ a-fax data from a customer application;
4 sending the fax data to one or more previously designated recipient fax machines;
5 receiving a request for specific fax data from a wireless device during a data
6 session;
7 receiving a destination fax number from the wireless device; and
8 sending the fax data to the destination fax number.

1 9. (currently amended) The method of claim 8, wherein the data
2 communication session is a wireless application protocol (WAP) communicationsession.

1 10. (currently amended) ~~The method of claim 1, further comprising A method~~
2 for conducting a communication session, comprising:
3 during the communication session, triggering a wireless data communication via a
4 wireless data channel from a voice communication, including pushing data to the wireless
5 data channel and pulling data from the wireless data channel;
6 wherein triggering the wireless data session includes transmitting one or more of
7 automatic number identification (ANI) data, dialed number identification service (DNIS)
8 data, and unique identifier (UID) data via a wireless device; and
9 during the communication session, triggering a voice communication via a voice
10 channel from the wireless data communication, including pushing data to the voice channel
11 and pulling data from the voice channel, wherein during the communication session, data is
12 maintained across the wireless data channel and the voice channel, and wherein the data
13 pushed and pulled includes VoiceXML data, hypertext transfer protocol (HTTP) data,
14 wireless application protocol (WAP) data, short message service (SMS) data, and wireless
15 markup language (WML) data; and
16 a directory service, including, including:

Atty. Docket No.: RMWR.P007

Patent 09/932,439

17 maintaining a directory of information items including entries formatted for
18 a wireless device display, wherein maintaining includes receiving entries and configuration
19 preferences;
20 retrieving entries in response to a request during a communication session
21 via the wireless device, wherein the request includes a voice request request, and a data
22 request; and
23 displaying a requested information item on the wireless device display.

1 11. (currently amended) ~~The method of claim 1, further comprising~~ A method
2 for conducting a communication session, comprising:
3 during the communication session, triggering a wireless data communication via a
4 wireless data channel from a voice communication, including pushing data to the wireless
5 data channel and pulling data from the wireless data channel;
6 wherein triggering the wireless data session includes transmitting one or more of
7 automatic number identification (ANI) data, dialed number identification service (DNIS)
8 data, and unique identifier (UID) data via a wireless device; and
9 during the communication session, triggering a voice communication via a voice
10 channel from the wireless data communication, including pushing data to the voice channel
11 and pulling data from the voice channel, wherein during the communication session, data is
12 shared between the wireless data channel and the voice channel, and wherein the data
13 pushed and pulled includes VoiceXML data, hypertext transfer protocol (HTTP) data,
14 wireless application protocol (WAP) data, short message service (SMS) data, and wireless
15 markup language (WML) data; and
16 a device registration service, comprising,
17 capturing a device identification (ID) during a data communication session
18 initiated by a device user for registering the device;
19 querying the user for a telephone number of the device;
20 presenting the user with a personal identification number (PIN) that is
21 unique to the user;

Atty. Docket No.: RMWR.P007

Patent 09/932,439

22 automatically ~~leaving terminating~~ the data communication session and
23 initiating a voice communication session to the device; and
24 during the voice communication session, prompting the user to enter the
25 PIN; and receiving the PIN and relating the telephone number to the device ID.

1 12. (currently amended) A wireless communication method, comprising:
2 during a communication session, triggering a wireless data communication via
3 ~~session with a wireless data channel from a voice communication session~~, including pushing
4 data to the wireless data channel and pulling data from the wireless data channel; ~~and~~
5 during the communication session, triggering a voice communication via session
6 ~~with a voice channel from the a wireless data communication session~~, including pushing
7 data to the voice channel and pulling data from the voice channel, wherein during the
8 communication session, data is maintained across shared between the wireless data channel
9 and the voice channel. the data comprising historical data and user selection data;
10 capturing a device identification (ID) during a data communication session initiated
11 by a device user for registering the device;
12 querying the user for a telephone number of the device;
13 presenting the user with a personal identification number (PIN) that is unique to the
14 user;
15 when the device does not support a simultaneous voice channel and data channel
16 communication session, automatically leaving terminating the data communication session
17 and initiating a voice communication session to the device;
18 during the voice communication session, prompting the user to enter the PIN; and
19 receiving the PIN and relating the telephone number to the device ID.

1 13. (currently amended) The wireless communication method of claim 12,
2 wherein triggering a wireless data communication session includes transmitting automatic
3 number identification (ANI) data, dialed number identification service (DNIS) data, and
4 unique identifier (UID) data via a wireless device.

Atty. Docket No.: RMWR.P007

Patent 09/932,439

1 14. (original) The wireless communication method of claim 12, wherein the
2 data pushed and pulled includes VoiceXML data, hypertext transfer protocol (HTTP) data,
3 wireless application protocol (WAP) data, short message service (SMS) data, and wireless
4 markup language (WML) data.

1 15. (original) The wireless communication method of claim 12, further
2 comprising toggling between a data channel and a voice channel in one communication
3 session.

1 16. (original) The wireless communication method of claim 12, wherein the
2 data pushed and pulled includes actionable data that initiates an action in a channel
3 receiving the actionable data.

1 17. (original) The wireless communication method of claim 12, further
2 comprising navigating data that was pushed or pulled from the voice channel or the data
3 channel, wherein navigation functions include fast forward, rewind, pause, and delete.

1 18. (canceled).

1 19. (currently amended) A system for wireless network communication,
2 comprising: at least one network coupled among two or more wireless communication
3 devices and at least one customer application; and
4 two or more components coupled to the at least one network, including, a computer
5 telephony integration/interactive voice response (CTI/IVR) service, a fax service, a call
6 service, ~~a fax service~~, and a directory service, wherein the wireless communication devices
7 access the components during a communication session, and wherein the communication
8 session includes,
9 triggering a wireless data ~~communication~~session with a wireless data
10 channel from a voice ~~communication~~session, including pushing data to the wireless data
11 channel and pulling data from the wireless data channel; and

Atty. Docket No.: RMWR.P007

Patent 09/932,439

12 triggering a voice ~~communication session~~ with a voice channel from the a
13 wireless data ~~communication session~~, including pushing data to the voice channel and
14 pulling data from the voice channel, wherein during the communication session, data is
15 maintained across shared between the wireless data channel and the voice channel,
16 wherein the call service component includes,
17 an incall service;
18 an outcall service; and
19 a call service interactive voice response (IVR) application, wherein the incall
20 service,
21 receives content from the at least one customer application, wherein
22 the content is selected using a wireless communication device;
23 transfers the content to the IVR application;
24 notifies the customer application that the IVR application is ready to
25 communicate with the wireless communication device; and
26 sends an identifier of the wireless communication device and a status
27 message to the customer application, wherein the status message indicates a status of
28 communication between the wireless communication device and the IVR application.

1 20. (currently amended) The system of claim 19, wherein triggering a wireless
2 data ~~communication session~~ includes transmitting automatic number identification (ANI)
3 data, dialed number identification service (DNIS) data, and unique identifier (UID) data via
4 a wireless communication device.

1 21. (original) The system of claim 19, wherein the data pushed and pulled
2 includes VoiceXML data, hypertext transfer protocol (HTTP) data, wireless application
3 protocol (WAP) data, short message service (SMS) data, and wireless markup language
4 (WML) data.

1 22. (canceled).

Atty. Docket No.: RMWR.P007

Patent 09/932,439

1 23. (currently amended) The system of ~~claim 19~~claim 22, wherein the outcall
2 service handles voice channel content to be sent to a wireless communication device at a
3 predetermined time, wherein handling includes:
4 receiving content from the customer application;
5 transferring the content to the IVR application;
6 notifying the customer application that the IVR application is ready to communicate
7 with the wireless communication device; and
8 sending a status message to the customer application that indicates a status of
9 communication between the wireless communication device and the IVR application,
10 including any response from the wireless communication device.

1 24. (currently amended) The system of claim 19, wherein the homepage
2 provisioning service component includes:
3 after the initiation of a voice communication session from a wireless communication
4 device, receiving an identifier for the wireless communication device;
5 ~~leaving terminating~~ the voice communication session;
6 locating a homepage uniform resource locator (URL) using the identifier;
7 sending the homepage URL to a messaging service, wherein the messaging service
8 sends an actionable alert to the wireless communication device, wherein the homepage
9 URL is embedded in the actionable alert such that responding to the actionable alert using
10 the wireless communication device initiates a data communication session with the
11 homepage URL.

1 25. (currently amended) ~~The system of claim 19,~~ A system for wireless network
2 communication, comprising: at least one network coupled among two or more wireless
3 communication devices and at least one customer application; and
4 two or more components coupled to the at least one network, including, a computer
5 telephony integration/interactive voice response (CTI/IVR) service, a fax service, a call
6 service, and a directory service, wherein the wireless communication devices access the

Atty. Docket No.: RMWR.P007

Patent 09/932,439

7 components during a communication session, and wherein the communication session
8 includes,
9 triggering a wireless data communication via a wireless data channel from a
10 voice communication, including pushing data to the wireless data channel and pulling data
11 from the wireless data channel; and
12 triggering a voice communication via a voice channel from the wireless data
13 communication, including pushing data to the voice channel and pulling data from the voice
14 channel, wherein during the communication session, data is maintained across the wireless
15 data channel and the voice channel,
16 wherein the fax service component ~~includes,~~includes:
17 an application specific wireless markup language (WML) dialog module
18 coupled to a wireless communication device;
19 a fax server coupled to the WML dialog module; and
20 a messaging service, wherein the fax service,
21 executes a request to send a fax, including receiving the request,
22 including during a wireless application protocol (WAP) session, wherein the request
23 includes format and addressing information during a wireless application protocol (WAP)
24 session, and sending a status message to a wireless device regarding a status of the request;
25 and
26 executes a scheduled request to send a fax to one or more previously
27 identified recipients, including sending a message to the one or more recipients asking
28 whether the recipient wants to receive the fax, and sending a message to a sender of the
29 scheduled request indicating a status of the scheduled request.

1 26. (currently amended) ~~The system of claim 19,~~ A system for wireless network
2 communication, comprising: at least one network coupled among two or more wireless
3 communication devices and at least one customer application; and
4 two or more components coupled to the at least one network, including, a computer
5 telephony integration/interactive voice response (CTI/IVR) service, a fax service, a call
6 service, and a directory service, wherein the wireless communication devices access the

Atty. Docket No.: RMWR.P007

Patent 09/932,439

7 components during a communication session, and wherein the communication session
8 includes,

9 triggering a wireless data communication via a wireless data channel from a
10 voice communication, including pushing data to the wireless data channel and pulling data
11 from the wireless data channel;

12 triggering a voice communication via a voice channel from the wireless data
13 communication, including pushing data to the voice channel and pulling data from the voice
14 channel, wherein during the communication session, data is maintained across the wireless
15 data channel and the voice channel and;

16 ~~wherein the two or more components further comprise a device registration service,~~
17 comprising, comprising:

18 capturing a device identification (ID) during a data
19 communication session initiated by a device user for registering the device;

20 querying the user for a telephone number of the device;

21 presenting the user with a personal identification (PIN) number that
22 is unique to the user;

23 when the device does not support a simultaneous voice channel and
24 data channel communication session, automatically leaving terminating the data
25 communication session and initiating a voice communication session to the device; and

26 during the voice communication session, prompting the user to enter
27 the PIN; and receiving the PIN and relating the telephone number to the device ID.

1 27. (currently amended) An electromagnetic medium having instructions stored
2 on it, that when executed by a processor, cause the processor to:

3 during a communication session between two or more devices, trigger a wireless
4 data communication session via with a wireless data channel from a voice
5 communication session, including pushing data to the wireless data channel and pulling data
6 from the wireless data channel; ~~and~~

7 during the communication session, trigger a voice communication session via with a
8 voice channel from a wireless data communication session, including pushing data to the

Atty. Docket No.: RMWR.P007

Patent 09/932,439

9 voice channel and pulling data from the voice channel, wherein during the communication
10 session, data is maintained across ~~shared between~~ the wireless data channel and the voice
11 channel;
12 capturing a device identification (ID) during a data session initiated by a device user
13 for registering the device;
14 querying the user for a telephone number of the device; presenting the user with a
15 personal identification number that is unique to the user;
16 when the device does not support simultaneous voice channel and data channel
17 communication sessions, automatically leaving the data communication and initiating a
18 voice communication to the device;
19 during the voice communication, prompting the user to enter the PIN; and
20 receiving the PIN and relating the telephone number to the device ID.

1 28. (currently amended) The electromagnetic medium of claim 27, wherein
2 triggering a wireless data ~~communication session~~ includes transmitting automatic number
3 identification (ANI) data, dialed number identification service (DNIS) data, and unique
4 identifier (UID) data via a wireless device.

1 29. (original) The electromagnetic medium of claim 27, wherein the data
2 pushed and pulled includes VoiceXML data, hypertext transfer protocol (HTTP) data,
3 wireless application protocol (WAP) data, short message service (SMS) data, and wireless
4 markup language (WML) data.

1 30. (original) The electromagnetic medium of claim 27, further comprising
2 toggling between a data channel and a voice channel in one communication session.

1 31. (original) The electromagnetic medium of claim 27, wherein the data
2 pushed and pulled includes actionable data that initiates an action in a channel receiving the
3 actionable data.

Atty. Docket No.: RMWR.P007

Patent 09/932,439

1 32. (original) The electromagnetic medium of claim 27, further comprising
2 navigating data that was pushed or pulled from the voice channel or the data channel,
3 wherein navigation functions include fast forward, rewind, pause, and delete.

1 33. (canceled).

1 34. (currently amended) A wireless communication apparatus, comprising:
2 means for triggering a wireless data communication via session with a wireless data
3 channel from a voice communication session, and for triggering a voice communication via
4 session with a voice channel from the a-wireless data communication session, wherein
5 during the communication session, data is maintained across shared between the wireless
6 data channel and the voice channel; and
7 call service means for facilitating the communication session, including,
8 means for communicating with a customer application to receive a
9 specification of data to be pushed or pulled during the communication session;
10 means for performing data formatting as required on data to be pushed or
11 pulled during the communication session; ~~and~~
12 means for communicating with an interactive voice response (IVR)
13 application, including transferring formatted data to the IVR application for delivery to a
14 wireless device and receiving data from the wireless device via the IVR application; and
15 incall service means that that handles voice channel content to be sent to a
16 wireless device in response to a request from the wireless device, the incall service
17 including:
18 means for receiving content from the customer application, wherein
19 the content is selected using a wireless device;
20 means for transferring the content to an interactive voice response
21 (IVR) application;
22 means for notifying the customer application that the IVR application
23 is ready to communicate with the wireless device; and

Atty. Docket No.: RMWR.P007

Patent 09/932,439

24 means for sending an identifier of the wireless device and a status
25 message to the customer application, wherein the status message indicates a status of
26 communication between the wireless device and the IVR application.

1 35. (canceled).

1 36. (currently amended) The apparatus of ~~claim 34~~~~claim 35~~, wherein the call
2 service means further includes an outcall service that that handles voice channel content to
3 be sent to a wireless device at a predetermined time, the outcall service, including:
4 means for receiving content from the customer application; means for transferring
5 the content to the IVR application;
6 means for notifying the customer application that the IVR application is ready to
7 communicate with the wireless device; and
8 means for sending a status message to the customer application that indicates a
9 status of communication between the wireless device and the IVR application, including
10 any response from the wireless device.
